

Dear NLXP Users,

We would like to inform you of improvements that have now been applied to the [Home - National Level Crossing Portal](#).

These enhancements will be available from Wednesday, 17 December.

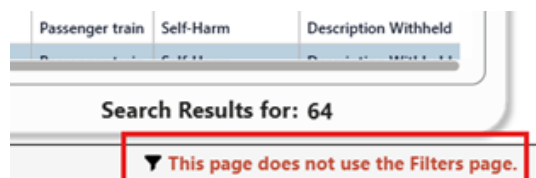

What are the enhancements?

1. New description added to pages that do not use the shared filter page

To help users easily understand when a page is not controlled by the main filter panel, a message has been added to the bottom-right corner of relevant pages.

Pages with this new indicator are:

- Self Harm
- Self Harm Drill Through
- Site Profile

2. Updated name of the filter field used in Excel exports of Self Harm Drill Through Page

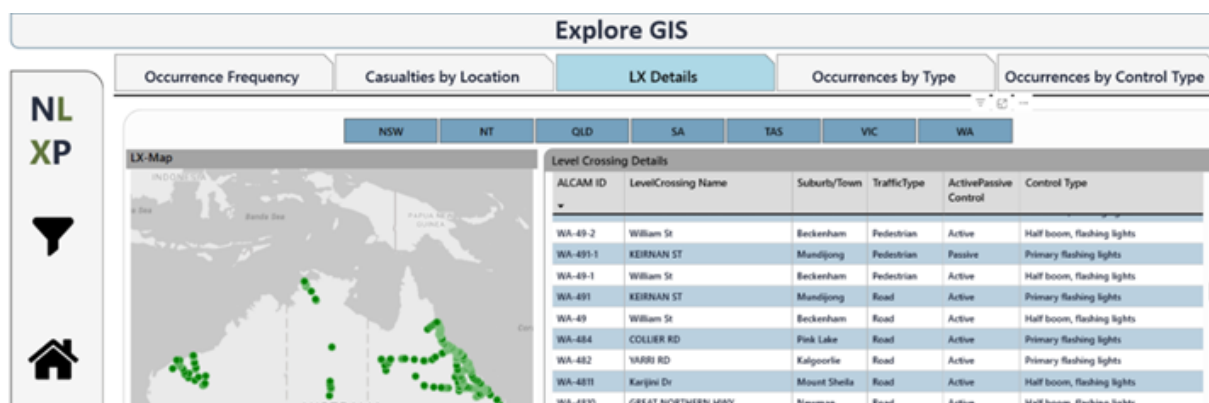

The screenshot shows the 'Self Harm Drill Through' page. On the left is the NLXP logo. The main area contains a table with the following columns: Jurisdiction, ALCAM Id, Location Name, Line Section Name, Rail Infrastructure Manager, Rolling Stock, and Occurrence. The table lists various incidents across different jurisdictions (VIC, SA) and locations (e.g., Bayswater Ave Pedestrian Crossing, Linacre Rd Crossing). On the right side of the table, there is a filter dropdown menu. The 'Export data' option is highlighted with a red box.

The Occurrences column has been removed from the LX Details page to avoid confusion and improve clarity for end users.

Instead, send a new email to support@nxp.com.au so a separate support ticket can be raised, and your enquiry can be investigated and addressed appropriately.
